

# Welcome

“Strengthening Australia's ability to use global identifier infrastructure”

PILIN Project aims to:

1. *Develop* an abstract model for identifiers and their management
2. *Develop* shared, standards-based, persistent identifier management infrastructure
3. Support *adoption* of persistent identifiers and services
4. Plan for *sustainable* shared identifier infrastructure

Supporting adoption through

- “proof of concept” deployment and demonstrator services
- documenting best practice

*The PILIN project has been successfully completed and the final report can be found at [http://www.pilin.net.au/Closure\\_Report.pdf](http://www.pilin.net.au/Closure_Report.pdf).*

*For subsequent work on Persistent Identifiers by the Link Affiliates team, see <http://linkaffiliates.net.au/pilin2/> . There are ongoing discussions on establishing a National Persistent Identifier Service, and the [Australian National Data Service](#) has launched an [Identify My Data](#) service for Australian researchers.*

The PILIN project is funded by the Australian Commonwealth Department of Education, Science and Training, ([DEST](#)) under the Systemic Infrastructure Initiative ([SII](#)) as part of the Commonwealth Government’s Backing Australia’s Ability – An Innovation Action Plan for the Future ([BAA](#)) under the ARROW Project.
